PROJECTS

ReadyAPI Virtualization scripting sample

This project shows how to use ReadyAPI Virtualization scripts for various tasks: reading request content to select a response, reading file content to send it in a response, and dearing virtual service properties when that virtual service starts.

REST VirtResponse

You use a REST VirtResponse test step to return some predefined response to a REST request. This sample project demonstrates how you can use this step in your API tests.

Clear Property Values

This project shows how to clear all custom property values at the test case, test suite, and project levels in a project tear down script using Groovy. This is useful for clearing any custom property values that should be blank when the project finished running.
